The company

The company Planungsgruppe M+M AG

Foto: Michael Voit

Since the foundation in 1970, PGMM developed with continuous growth to a national wide operating enterprise.

Our employees are supply engineers, electrical engineers, environment engineers, medical engineers, hygiene technology engineers as well as chemists, physicians, biologists and graduates of business administration.

In multidisciplinary groups we develop technical solutions for the infrastructure and the fixture of buildings. Such service is offered for new building, rebuilding, remedial action as well as for the continuing operations and maintenance.

The basis of our development and success are our active approach of the latest technical developments, the implementation of feasible solutions, the willingness for groundbreaking approach as well as our expertise in customer processes and intentions.

Our corporate structure in form of a public limited company facilitates a long term progress. The shares are with our top management. Therefore we are independent from other enterprises
